WHAT IS AN AGENT?

Agency begins with **a single cell**

in a medium, it senses, prefers, and moves

that's agency

AN AGENT IS SOFTWARE WITH AGENCY

senses

receives inputs
and triggers

reasons

intelligence
decides

acts

causes effects
in the world

same loop as the cell — sense, prefer, act

HUMANS HAVE AGENCY

For 300,000 years, we protected it

ceremony

language

ritual

story

kinship systems — reciprocity, face to face

perfect for tribes and clans. It didn't scale.

THE WRITTEN WORD CHANGED EVERYTHING

We traded **agency** for **scale**

ORGANIZATIONS GAINED

rules enforced at distance

hierarchy and bureaucracy

deterministic systems

civilizations of millions

HUMANS GAVE UP

face to face

reciprocity

a real voice

human agency

scale up, agency down — for 9,000 years

The DUNA changes that

DECENTRALIZED UNINCORPORATED NONPROFIT ASSOCIATION

A DUNA...

CAN

own assets and property

earn profits

raise capital

hire and fire

HAS

no executives

no board

no shareholders extracting value

governance by the members

100+ members · completely online · governed through software

HOW IT WORKS — ALL COMPOSED

governance

every decision made by the members, in the open

technology

the organization itself, written as software

economics

members paid for contributions; the treasury owns property

culture

the magic that holds it together

governance + technology + economics + culture, composed in one system

Compute, **not stock**

A DUNA CAN'T

distribute profits based on holdings

issue equity — there is none

A DUNA CAN

pay members for contributions

earn revenue, grow a treasury

own property and assets

every duna issues its own Compute — tradable on decentralized exchanges

Compute can passively gain in value
